SUMMARY

Full stack engineer with 7+ years building production web applications, backend services, and API integrations, with deep frontend expertise as a force multiplier for cross-functional collaboration. Experienced building AI-leveraged workflows — agentic tooling, LLM integrations, AI-assisted development — always with a human in the loop for review and judgment. I care about craft: recognizing “doing it right” is the true path to extensibility and sustainability, and about working closely with product, engineering, and design partners to design scalable, reliable systems and ship them end to end.

SKILLS

Backend: TypeScript, Node.js, Express, RESTful APIs, GraphQL

AI & Agentic Workflows: LLM integration, tool-calling & MCP architectures, model-agnostic AI systems, AI-assisted development with human-in-the-loop review

Databases: PostgreSQL (schema design, migrations, query optimization), MongoDB, MySQL, Redis

Infrastructure & CI/CD: Docker & Docker Compose, GitHub Actions (YAML-based CI/CD pipelines), Git (PR workflows), GCP, AWS

E-commerce & Integrations: Shopify (Admin API, Storefront API, Oxygen/Hydrogen, webhooks), third-party API integrations (Slack, Microsoft Teams)

Testing & Observability: Playwright, Vitest, React Testing Library, Mocha, New Relic (dashboards & alerting)

Frontend: React, Next.js, JavaScript (ES6+), Vue 3, HTML5, CSS3, Tailwind, Webpack, Vite

CMS & Content: Headless CMS architecture, content workflow tooling, editorial UX

Design Systems: Component library development, web design system maintenance, cross-team standards

EXPERIENCE

Full Stack Developer — Intellective (ServiceNow Partner) July 2022 – Present · Remote

Intellective builds enterprise workflow software. I joined as a full stack engineer and evolved into a technical lead role, owning product architecture and shipping across the full stack.

- Designed and built “Amaze” — a GrapesJS-based drag-and-drop content editor with an integrated agentic LLM chat interface, now live at enterprise clients. Built with Vue 3, a custom Tailwind 4 browser compiler on an off-thread web worker, a ports-and-strategies transport layer for LLM-agnostic model switching, and local tool calling — architected to keep humans in control of final output. Frontend-first, production-grade, shipped end-to-end.
- Built and maintained a component library and design system used across multiple products — standardizing UI patterns, ensuring consistency, and enabling non-engineering teams to move faster without breaking things.
- Led modernization of web product build pipelines: rearchitected Webpack/Vite configs, standardized API patterns with extensible analytics and visibility, and improved reliability and performance across services.
- Set up and maintained YAML-based CI/CD pipelines (GitHub Actions) and Docker Compose-based service orchestration to keep builds and deployments consistent across environments.
- Regular daily user of AI-assisted development tools (e.g., Claude Code, Copilot-class assistants) to accelerate implementation and documentation, paired with rigorous human code review to keep AI output accountable.
- Collaborated closely with product, design, and marketing stakeholders to refine requirements, evaluate tradeoffs, and ship user-focused features on tight timelines.
- Built a ServiceNow CLI (Node.js, streaming, advanced async) and an MCP server.

Independent Contractor — Private Client Engagements 2025 – Present · Remote

Side consulting engagements alongside my primary role, delivering e-commerce and integration work for private clients.

- Built and customized Shopify storefronts using the Admin API, Storefront API, and Oxygen (Hydrogen hosting), including webhook-driven data sync between Shopify and client systems.
- Delivered external API integrations connecting client workflows to third-party platforms including Slack and Microsoft Teams, automating notifications and cross-tool data flow.

Hack Reactor Shepherd (Mentor Position) — Galvanize

- Mentored 100+ engineering students across React, Node.js, SQL/NoSQL, and software design fundamentals.
- Built a strong practice of communicating architectural decisions clearly — translating technical complexity for non-technical audiences.

Projection Technician — Dolby Laboratories Contract

- High-precision technical operations in a QA-intensive environment. Developed meticulous attention to system behavior, edge cases, and failure modes.
